### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 138, 140, 141, 143, 146-154 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of U.S. Patent No. 5,922,005 and/or over claims 1-3 of U.S. Patent No. 6,692,522 B1 in view of Kleshinski et al US Patent 5,540,712. Although the conflicting claims are not identical, they are not patentably distinct from each other because both cases disclose the steps of cutting, providing a flat metal sheet and joining two ends by welding the structures below a V-shaped notch.

Note: ‘005 discloses the method of making the stent and US Patent ‘522 discloses the V-shaped notch.

The Richter et al references disclose the invention substantially as claimed. However, the Richter et al reference does not clearly disclose a welding comprises drawing material from the surface defining the engagements points to create the weld and joining the stent over a mandrel.

Art Unit: 3738

Kleshinski et al teaches a method of forming a stent by welding two parts together in for the purpose of providing a strong bond between the skeletal frame of the stent (see col. 8, lines 62-67; and col. 9, lines 1-6).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to melt material from the surfaces of the engagement points to create a weld over a mandrel in order to provide a strong bond between the skeletal frame of the stent.

***Allowable Subject Matter***

Claims 142, 144, 145 and 155-157 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
